Movie budget predication

19 October 2021

MVP

A movie rating profit rate prediction project was implemented for the purpose of designing an algorithm. It can predict movie rating earnings for movie service subscribers (such as imdb and tv time).

The purpose of this project is to understand the A movie rating profit rate prediction project was implemented for the purpose of designing an algorithm R^2 is 0.625 for linear regression model. The goal of this figure is to present and compare between the Observed vs. Predicted values and Residuals vs. Prediction.

Observed vs. Predicted : The figure shows me the relationship between the actual and predicted values.

Predicted values : The figure shows me predicting the relationship between the residual values and the predicted values.
